نحوه محاسبه H.INDEX

تهیه کننده: لیلا نامدار

کارشناس ارشد کتابخانه مرکزی و مرکز اسناد

۱۳۹۴

H-index یا Highly Cited Index معیاری

است که برای سنجش میزان فعالیت علمی اشخاص،
موسسات و سازمانها و حتی کشورها به کار برده می
شود. برای محاسبه H-index، عدد n ام مقاله ای که
تعداد استنادات برابر با عدد n داشته باشد، به عنوان
مقدار H-index محسوب می شود.

To determine which author names should be grouped together under a single identifier number, the Scopus Author Identifier uses an algorithm that matches author names based on their affiliation, address, subject area, source title, dates of publication, citations, and co-authors. Documents with insufficient data may not be matched, this can lead to more than one entry in the results list for the same author. By default, only details pages matched to more than one document in Scopus are shown in search results. [About Scopus Author Identifier](#)

Author last name "mansoori"

Edit

The Scopus Author Identifier assigns a unique number to groups of documents written by the same author via an algorithm that matches authorship based on a certain criteria. If a document cannot be confidently matched with an author identifier, it is grouped separately. In this case, you may see more than 1 entry for the same author.
